

Supplemental Figure 1

Supplemental Figure 1. Thymic iNKT cells are comparable among Wt B6, OX40Ltg, and OX40^{-/-} mice.

The thymus was harvested from 3 week old mice, and single cell preparation was prepared. Cell were stained with CD1d-tetramer and anti-CD3, and presence of iNKT cells was analyzed by flow cytometry. The percentage of iNKT cells among total thymocytes was shown. The plot is a representative data of one of three individual experiments.
